Converting "ArrayList<Object>" to "int[]" in Java

How could I convert an `ArrayList<Object>` to a simple integer array (`int []`) in Java?

I have an example:

```
List<ObjektZnk> li = new ArrayList<ObjektZnk>();
    li.add( new ObjektZnk(1, "i1", "somtext", R.
```

```
li.add( new ObjektZnk(2, "i5", "somtext", R.
li.add( new ObjektZnk(3, "i7", "somtext", R.
```
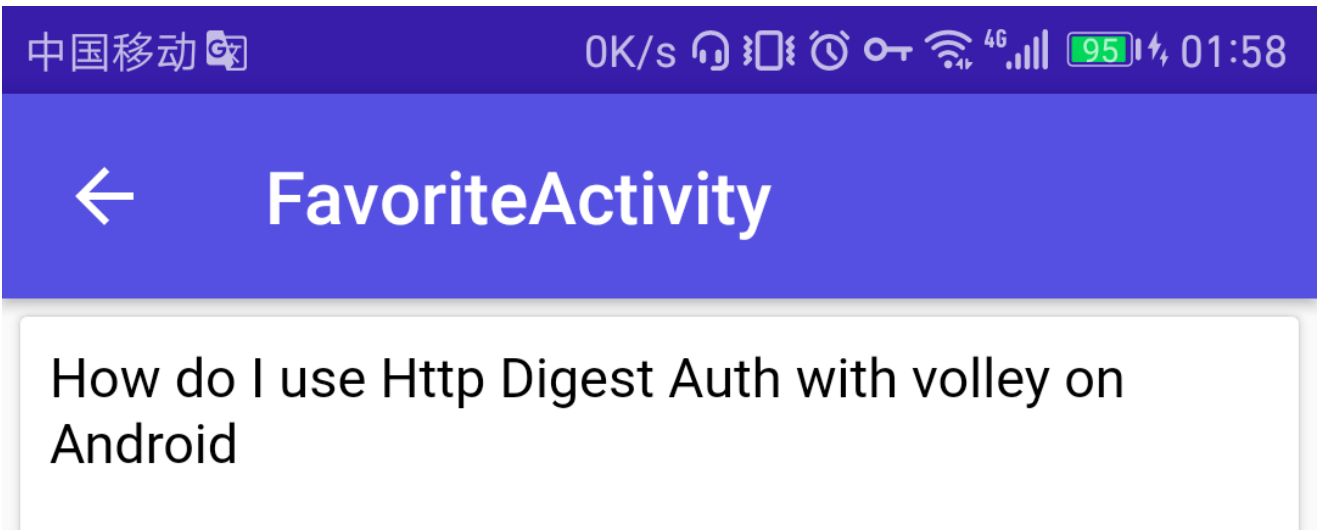

the object ObjektZnk:

```
public class ObjektZnaki {
        private int     id;
        private String op;
        private String sl;
        private int     drwS;

        public ObjektZnaki(int id, String sl, String
            this.setId(id);
            this.setOpis(op);
            this.setSlika(sl);
            this.setDrwSlika(drwS);
        }
```

And you also can find what you had collected in the favorite fragment, which you can find it on your navigation bar.
